---

PROFESSIONAL SUMMARY

Database Administrator with 2.5+ years of experience managing large-scale production databases across PostgreSQL, MSSQL, MySQL, and Redis environments. Skilled in SQL, Python, and analyzing system and performance data to improve reliability and efficiency. Experienced in monitoring, query optimization, and identifying patterns in structured data. Currently expanding knowledge in machine learning and statistical analysis to transition into data-driven roles.

TECHNICAL SKILLS

Databases: PostgreSQL, MSSQL, MySQL, Redis
Programming: Python, Basic Java
Data Analysis: SQL, Python (Pandas, NumPy – Learning)
Visualization: Grafana (Matplotlib – Learning)
Automation: Ansible
Monitoring: Grafana, Ipsentry
Platforms: Linux, Windows

Core Competencies:
Query Optimization • Performance Tuning • Data Analysis • Monitoring • Automation

PROFESSIONAL EXPERIENCE

Database Administrator | Casepoint Pvt Ltd | 2024 – Present

- Manage large-scale production databases ensuring high availability and data reliability
- Analyze SQL queries and database performance data to identify trends, anomalies, and optimization opportunities
- Work with large structured datasets to support performance tuning and data-driven decision-making
- Automate data processing and validation tasks using Python and Ansible, improving efficiency and consistency
- Monitor replication and ensure data consistency across distributed systems
- Design and develop Grafana dashboards to visualize system performance and key data insights
- Support data migration activities, ensuring data integrity and accuracy across environments
- Collaborate with cross-functional teams to analyze issues and improve system performance using data insights

PROJECTS

Redis Upgrade Automation

- Automated Redis upgrade process using Python and Ansible
- Reduced manual intervention and improved deployment consistency

- Minimized operational risks during production upgrades

Environment Setup & Migration (Casepoint–Opexus Integration)

- Supported MSSQL server setup and data migration from legacy systems
- Ensured data integrity and consistency during migration
- Performed validation and data checks post-migration

Grafana Monitoring & Alerting

- Developed dashboards for monitoring and analyzing system data
- Improved visibility into performance metrics and trends
- Configured alerting for proactive issue detection

DATA ANALYSIS & MACHINE LEARNING

- Learning Machine Learning concepts (Regression, Classification)
- Practicing data analysis using Python (Pandas, NumPy)
- Exploring data visualization techniques (Matplotlib, Seaborn)

KEY ACHIEVEMENTS

- Improved operational efficiency by automating database and data validation tasks using Python and Ansible
- Enhanced monitoring and alerting systems, enabling faster detection and resolution of performance issues
- Recognized with CP Excellence Award – "**The Hero with a Tie**" for ownership and reliability

EDUCATION

Bachelor of Engineering (Information Technology)
Gujarat Technological University | 2019 – 2023 | CGPA: 7.77

Higher Secondary (Science)
Vidhyamangal Residential School | 2017 – 2019

INTERESTS

Data Engineering • Machine Learning • Distributed Systems • Data Analysis • Database Performance Optimization
